

# MaxIM- Antik IPTV Management Server

## The power of Antik Technology!

*Antik Technology presents a professional cost-effective SW solution for a seamless management of your Antik set-top box and Mobile Application network. MaxIM is the corner stone of Antik Middleware Server Family. You can easily define your channel packages, configure all or only selected customers' STBs, collaborate with other part of the Antik Server Family such as Antik Archive Servers, Antik Mosaic Servers and VoD servers. The MaxIM management server SW can be easily connected to your billing or to the customer care application, so that your users' set-top boxes will be automatically activated and monitored using the same software your employees are familiar with.*

### Key features

- Simple channel and channel packages management
- Full remote control of set-top boxes and remote restart features (even on public internet)
- Remote set-top box firmware update
- Electronic Programme Guide database management and seamless EPG content import
- Integrated with other components of Antik Server Family
- STB management and user database
- Viewer statistics (users, channels, time,...)
- SNMP Communication Support
- Instant messaging to STBs
- Digital Signage - Promotions and Event Navigation Solution
- Integration and control of Mobile Application
- Hospitality features, welcome message, background image, language options etc. in the same platform

## MaxIM Administration

### Device

Manage the STBs in your network with a powerful management interface. Monitor a wide variety of parameters of each box. This superior statistics module brings a detailed statistic overview of the active STBs and viewers, as well as other vital information. It offers a manual STB / user registration and a channel pack allocation. Also API is integrated with billing.

**Packages** - Add channel packages to a selected set-top box and set the package validity.

**VLAN info** - An STB embedded switch that can be controlled from here.

**Groups** - Add selected set-top box to a group of STB's. Each set-top box can be added to a specific group. The STB's in this group can be controlled all together, so that the admin doesn't have to change settings on each set-top box separately.

**Remote control** - A list of the command buttons, which remotely control the set-top box.

**Status** - A list of the last activity on the set-top box that allows the admin to see for example what was a user watching before an error has occurred (coming soon).

The screenshot displays the ANTIK MaxIM Administration Panel. The interface includes a top navigation bar with the ANTIK logo and 'MaxIM ADMINISTRATION PANEL' text. Below the navigation bar, there are several input fields and dropdown menus for configuring a device. The 'Type' is set to 'STB', 'Service type' is 'OTT', 'Model' is 'Juice H256', and 'Mode' is 'Standard TV'. The 'Choose assigned Device' section has radio buttons for 'Connection Point' and 'Customer', with 'Test' selected. On the right, there are fields for 'Device ID', 'Description' (automatic added AS anonym), 'OS' (JuiceTV), 'OS v.' (3.38.0 ATK), 'Vendor' (Antik), 'App version' (2.2.36), 'IP', and 'Last online' (20.12.2016 10:26:13). Below these fields, there are status indicators for 'IR - remote control' (Enabled) and 'Debug mode' (Disabled). The bottom section features a 'Control' panel with buttons for 'STB on', 'STB off', 'Message', 'Switch', 'Volume', 'Mute', 'Unmute', 'Reload', 'Service Info', 'Open settings', and 'Subtitle'. On the far right, there are buttons for 'Restart STB', 'Restart GUI', 'Factory reset', and 'Tuneit'. At the bottom right, there are 'Cancel' and 'Save' buttons.

### Channels

Managing channels and packages has never been easier. The channel and package manager allows the admin to configure parameters of TV, Radio and LiveCam streams in the network, or enable advanced statistic features. Channel sources by the URL (UDP, RTP, HTTP, HLS) can be easily defined. There's also a global volume level correction in case of uneven audio sources available.

**Filter** - The admin can search channels by various categories, so that the searched subject can be found without long procedures.

Categories (tv, radio, cam) - The streams can be divided depending on media – TV streams, digital radios, city (or security) cameras

Receiver inventory - An overview of channels assigned to a specific receiver

25.	Zee Afham	TV	2		ARABIAN package (official)	

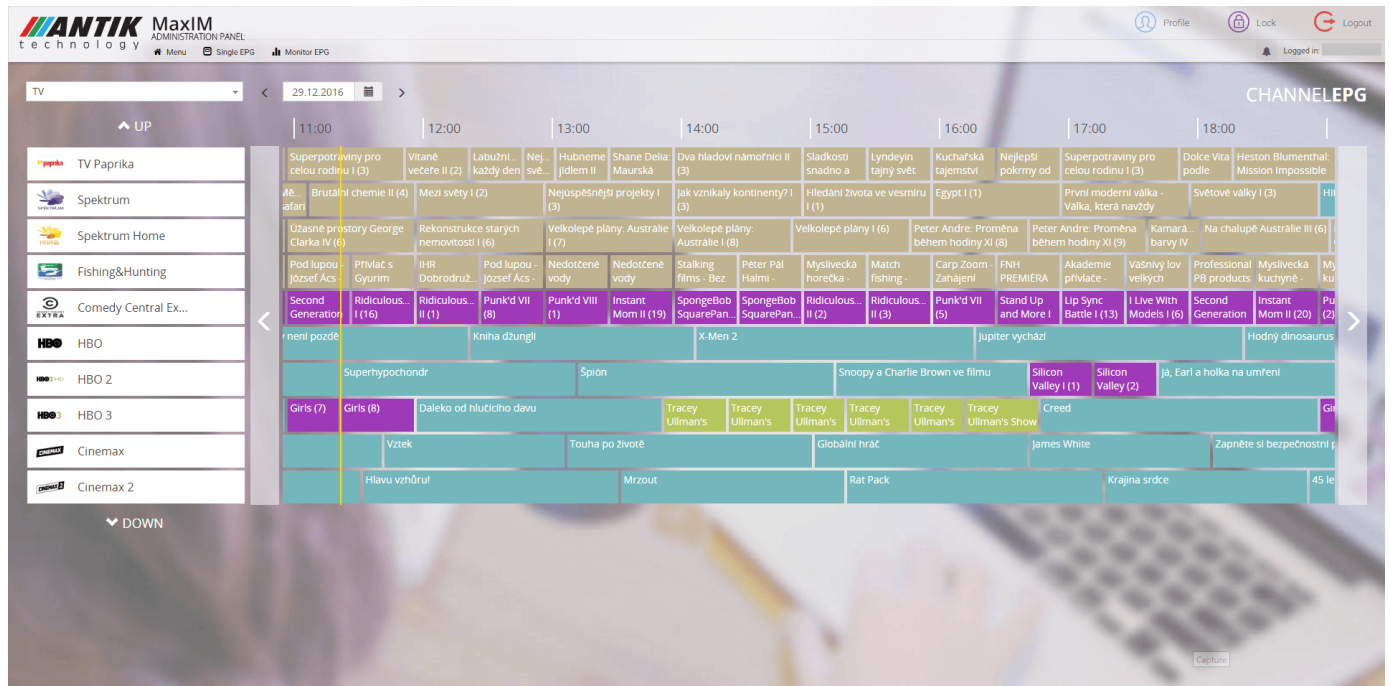

## Channel Details

Edit the channel's details, properties, icon and much more. This function offers a simple creation of channel packages and adding management of channel sources, video and audio codecs, and more. Here the admin can add a channel logo for the IMS and this logo will be displayed in the STB GUI menu of the end-user. The Parental control flag helps to manage an adult content.

ANTIK technology MaxIM ADMINISTRATION PANEL		Profile	Lock	Logout
Menu New channel Channels Package

Service Multicast		Stream URL		
Resolution 720	Quality MEDIUM	Bitrate	Crypto NONE	
Video Codec mp2v	Audio Codec mp3a	Video P.D	Audio P.D	
Time shift	Time shift min. min			
		Remove source		
Service Multicast		Stream URL		

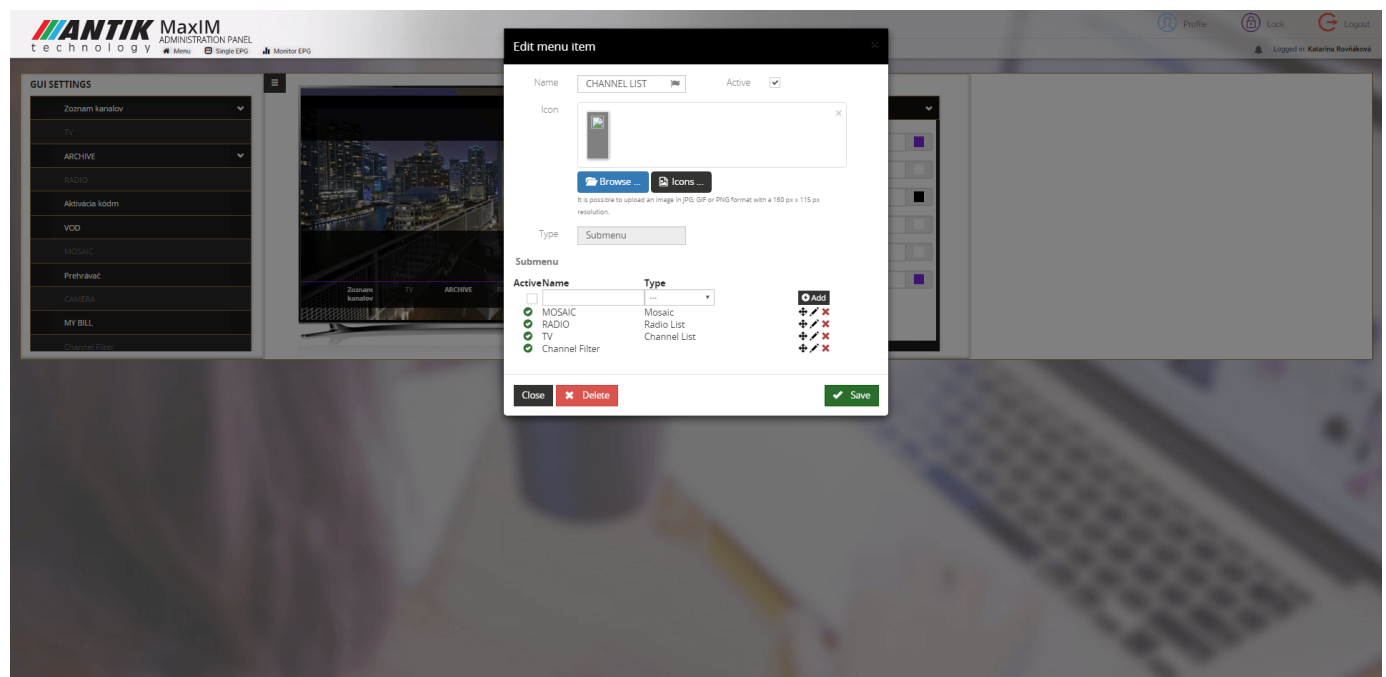

## EPG management

The EPG database import module is great tool to transform the EPG from the XML TV data formats into the Antik Server Database. The movie title, genre, long description, time, image cover are supported. The XML TV format is supported for a seamless program metadata import to the system. Then the system automatically downloads the new data and checks the consistency. The same data are used for STBs and mobile apps.

## GUI Customization

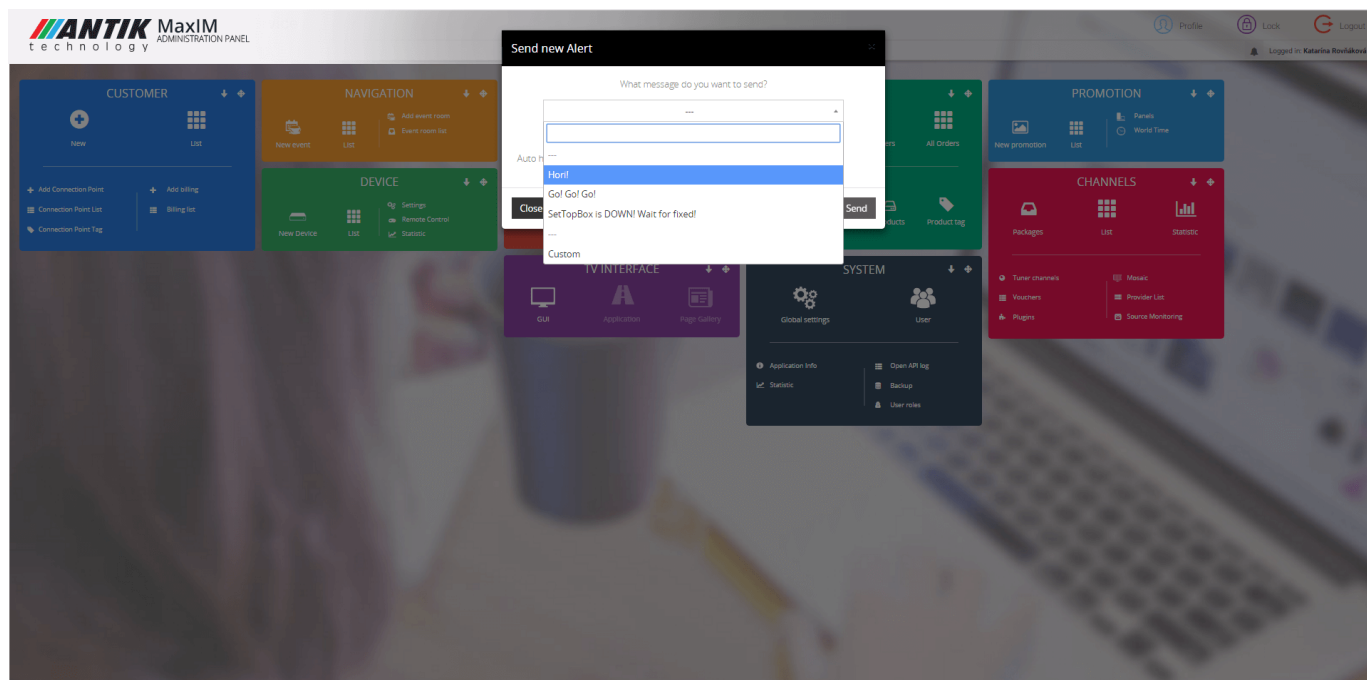

Choose a color of your Graphic User Interface from the background, through Icons, to text. Select your preferred language from several of world languages. When editing Menu Icons, delete or add new options in Menu that will show on the receivers' screen. Add submenus, name them and activate or deactivate due your needs. We bring not only this but many more possibilities of GUI customization.

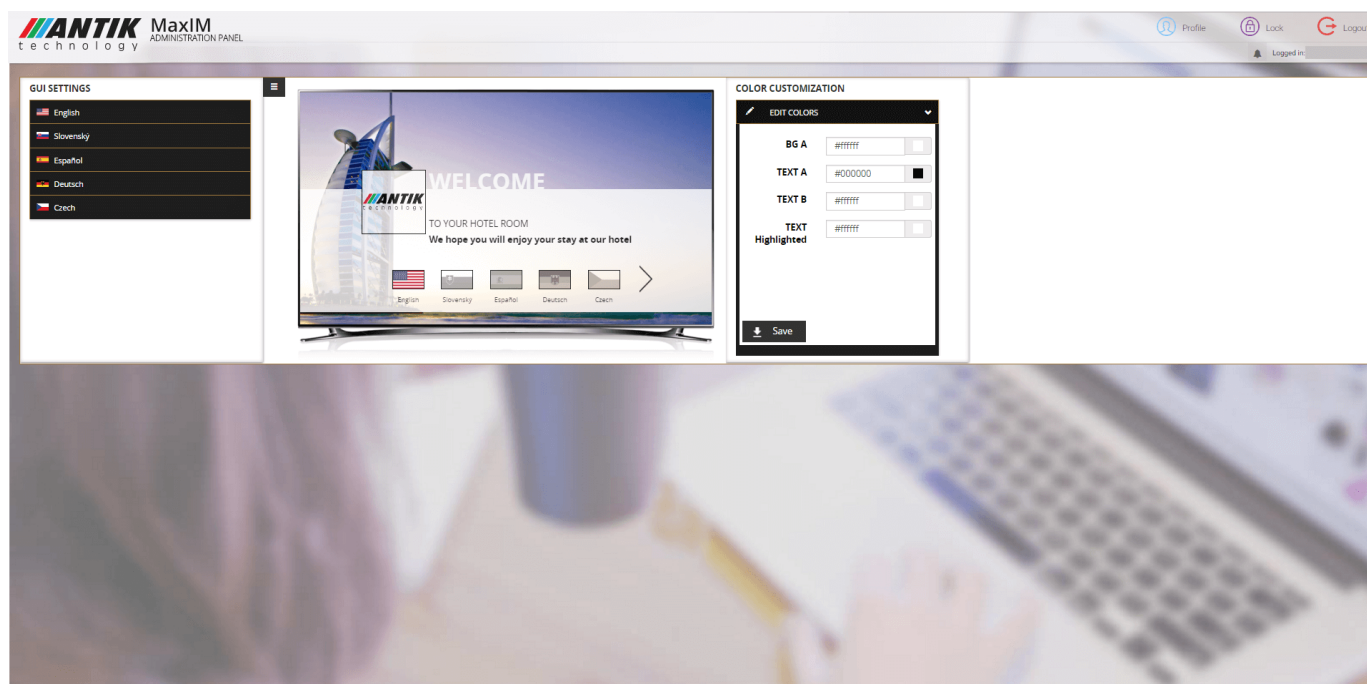

## Messages

There is a possibility to send messages directly to your customers' devices. You can set up the type of message (alert, flash, scrolling) and also duration of the visibility of the scrolling text. Choose from preset alert messages or make your custom one.

## Hospitality Solution Integrated

Antik MaxIM management server was created to be able to manage Antik Hospitality Solution as well. Choose channel packages for certain rooms, communicate with your customers through messages, and receive orders from them directly from their TV screens to management server. API is integrated with billing, so you are able to prepare bill for your customers within minutes.

## Promotion

In case you want to highlight your company and your products, we are offering Digital Signage Solution together with complex advertising delivery solution also managable through the same MaxIM server. Simply add your Antik Digital Signage panel to the system, create promotion campaigns and assign them to the panel.

The screenshot shows the 'MaxIM ADMINISTRATION PANEL' interface. The top navigation bar includes 'Menu', 'New promotion', 'Promotion list', and 'Panels'. The user is logged in as 'Katarina Rovnakova'. The main form is for creating a new promotion. It includes fields for 'Name' (Star Wars), 'Date from' (28.07.2016), 'Date to' (15.08.2016), 'Delay' (10), and 'Priority'. There are sections for 'Horizontal image' and 'Vertical image', both with 'Browse...' buttons. Below these are two panels: 'Info panel' and 'Navigation panel'. The 'Info panel' lists 'Antik - SW - development' and 'Zakaznicke Centrum\_KE\_Horizontalny'. The 'Navigation panel' lists various locations like 'ZC\_Stropkov', 'ZC\_Outdoor', 'ZC\_Vranov', etc., each with a status indicator.

## Navigation

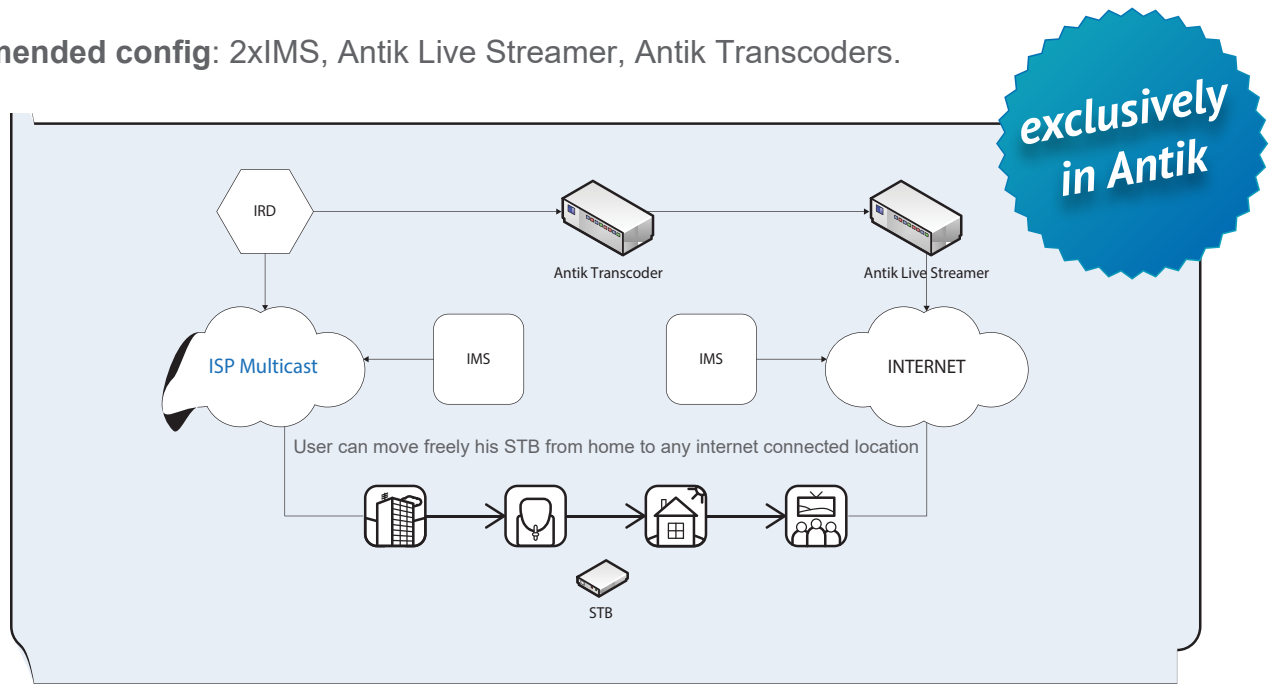

Manage the information displayed on navigation panels. Make sure your guests get right guidance to be on time at the right meeting point. Easy operation enables very fast content update.

The screenshot shows the 'MaxIM administration panel' interface for editing a navigation panel. The top navigation bar includes 'Menu' and 'Event list'. The user is logged in. The main form is for editing a navigation panel. It includes fields for 'Line 1' (MaxIM training), 'Line 2' (Be confident with MaxIM), 'Date from' (24.06.2016), 'Date to' (26.06.2016), 'Visible from' (24.06.2016), 'Visible to' (26.06.2016), 'Info panel' (24.06.2016), 'Navigation panel' (22.06.2016), 'Font size 1' (Large), 'Font size 2' (Mini), 'Event room' (ANTIK), and 'Description' (ANTIK meeting, training of MaxIM). There is a 'Logo' section with a preview of a dashboard image and a 'Browse...' button. The bottom right corner has 'Cancel' and 'Save' buttons.

## Hybrid multicast + OTT operation in same box

Same STB, same FW - working on internet and closed network. Unique Antik SW development - STB can automatically recognize, if is it connected to closed network or public internet. Same channels can be set in both scenarios so end-user can streamlessly nomade between OTT and multicast worlds.

**Recommended config:** 2xIMS, Antik Live Streamer, Antik Transcoders.

## Users activity stats

Detailed IPTV usage stats.

Channels, programmes, box, PAL/NTSC, PIP, aspect ratio, resolution, restarts, FW versions, etc.
